Study Overview

Building on findings from previous waves, this report tracks May wave 1 and wave 2 data about:

- **Federal vote**
- **Federal leadership**
- **Impressions of Mark Carney**

Key Findings

1

Liberals hold a 3-point lead over the Conservatives, although they have lost 3 points since the last wave. Liberals are strongest in Ontario, Quebec and Atlantic Canada, while Conservatives dominate in Alberta and the Prairies. Among decided voters, the Liberals sit at 42%, the Conservatives at 39%, and the NDP at 8%.

2

Federal government satisfaction rose to 49% with a steady upward trend since March. Perception of federal response to Donald Trump's presidency is improving, and nearly half (46%) of those who recently saw or heard about the Prime Minister felt more favourable as a result.

3

Mark Carney continues to be seen as the best option for Prime Minister, holding a 13-point lead over Poilievre overall and a 27-point lead in Quebec. Carney is ahead across all gender and age groups, and among most value clusters, except Populist Conservatives.

4

The drivers of this early Carney momentum that Canadians are reporting, reading, seeing, or hearing (RSH), is the perception that he is firmly **defending Canadian autonomy**, as seen in a meeting with President Trump, and the **formation of the new cabinet**.

5

His favourability appears to be boosted by media exposure. Among those aware of recent news about Carney, 46% said it left them feeling more favourable towards him.

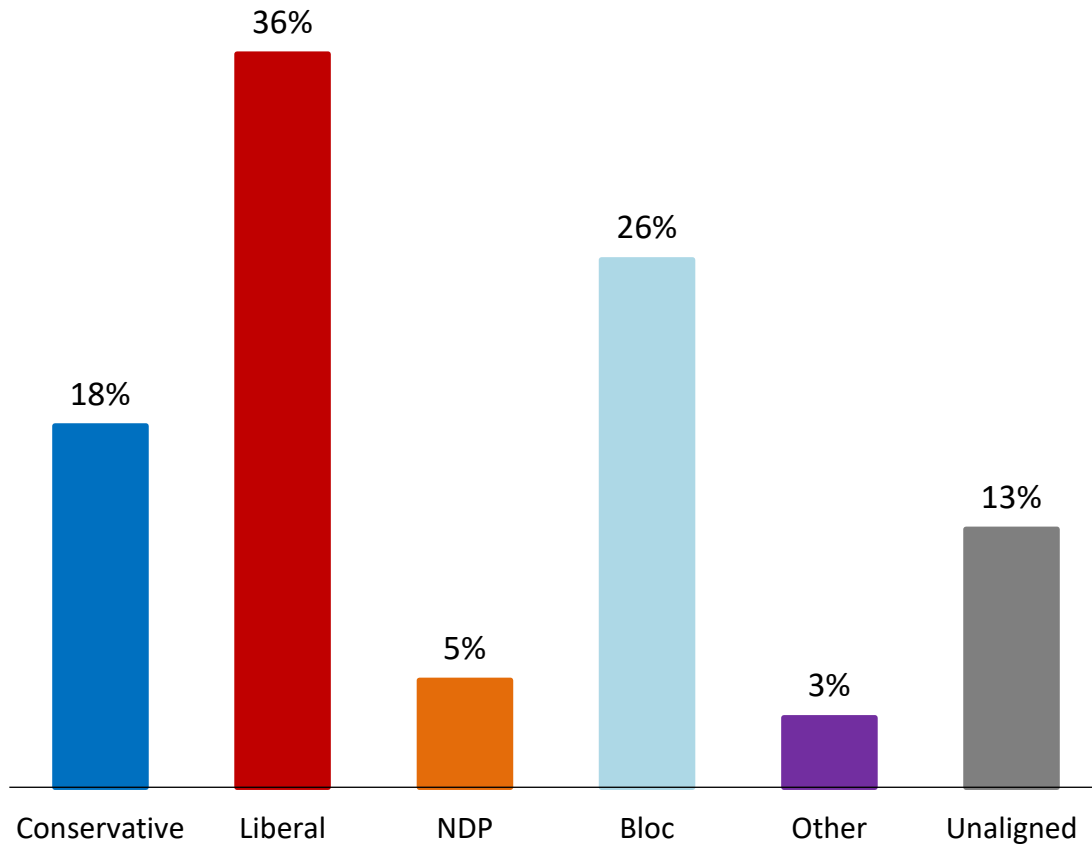

Key Voter Segments

Methodology

Survey Methodology - National

These are the results of an online survey conducted between May 12th and May 22nd, 2025.

Method: This online survey was conducted and sponsored by Innovative Research Group Inc. using INNOVATIVE's Canada 20/20 national research panel with additional respondents from Lucid, a leading provider of online sample. Each survey is administered to a series of randomly selected samples from the panel and weighted to ensure that the overall sample's composition reflects that of the actual Canadian population according to Census data.

Sample Size: n=2,517 Canadian citizens, 18 years or older. The results are nationally weighted to n=1,500 based on Census data from Statistics Canada.

Field Dates: May 12th to May 22nd, 2025.

Weighting: Results for Canada are weighted by age, gender, region, education, and self-reported federal past vote to ensure that the overall sample's composition reflects that of the actual population according to Census data. Weighted and unweighted frequencies are reported in the table.

Margin of Error: This is a representative sample. However, since the online survey was not a random probability-based sample, a margin of error cannot be calculated. Statements about margins of sampling error or population estimates do not apply to most online panels.

Note: Graphs may not always total 100% due to rounding values rather than any error in data. Sums are added before rounding numbers.

	Unweighted (n)	Unweighted (%)	Weighted (n)	Weighted (%)
